

MERN Stack Training

Company: Sensation Software Solutions

Student Name: Tajinder Kaur

Training Duration: 6 Months

Days: 25

Objective of the Day

The objective of Day 25 was to **start building a complete To-Do List application** by combining concepts learned from Day 21 to Day 24.

Work Done on Day 25

The trainer guided us step-by-step to create a **To-Do List React project structure**.

We implemented:

- Input field for task entry
 - Add task functionality
 - Display tasks dynamically
-

To-Do List Basic Logic

Example:

```
const [tasks, setTasks] = useState([]);

const addTask = () => {
  setTasks([...tasks, newTask]);
};
```

This helped in understanding how tasks are stored and displayed using state.

Hands-on Practice

We worked on:

- Creating task list UI
- Adding tasks
- Clearing input after submission

This day was fully practical and project-oriented.

Conclusion

Day 25 was very productive as it marked the **beginning of a real-world project**. All previously learned React concepts were now connected and applied practically.
