

## MERN Stack Training

**Company:** Sensation Software Solutions

**Student Name:** Tajinder Kaur

**Training Duration:** 6 Months

**Days:** 24

---

## Objective of the Day

The objective of Day 24 was to understand **CRUD operations conceptually** and learn how **lists and dynamic data rendering** work in React.

---

## Work Done on Day 24

The trainer explained **CRUD operations**:

- Create
- Read
- Update
- Delete

These operations were linked with **real-life applications** like To-Do lists.

---

## Rendering Lists in React

We learned how to use `map()` to display dynamic data.

### Example:

```
const tasks = ["Task 1", "Task 2", "Task 3"];  
  
{tasks.map((task, index) => (  
  <li key={index}>{task}</li>  
>))}
```

---

## State-Based Data Update

The trainer demonstrated how to:

- Add items to a list
- Delete items from a list
- Update UI automatically

This created a foundation for building a To-Do List application.

---

## Hands-on Practice

We practiced:

- Adding items to a list using input
  - Deleting items using buttons
  - Managing list data with state
- 

## Conclusion

Day 24 prepared us for **full CRUD-based React applications**, especially To-Do List projects.
